
(a)
exposure T (days)
blockade u_1 maintained on $[0, T]$
$u_{1,c}$
no duration suffices ($\mathcal{R}_0 > 1$)
1%
10%
panel (c)
$\log_{10} P(T)/P^*$
(b)
exposure needed T_ε (days)
distance to threshold $u_1 - u_{1,c}$
$\varepsilon = 10^{-2}$
$\varepsilon = 10^{-4}$
$\varepsilon = 10^{-6}$
$\log(10^6)/|\Lambda|$
(c)
living-cell density (arb. units)
time (days)
R (cycling G1)
G (S/G2/M)
Q (quiescent)
P (all living cells)
$u_1 = 0.95$
(d)
regrowth time (days)
quiescent share $Q/(R+Q)$ at withdrawal
50% of P^*
90% of P^*
